The WhatsApp Business Platform with Twilio

Using the WhatsApp Business Platform with Twilio, you can send and receive messages to [WhatsApp](#) users using the same Twilio Messaging APIs you already know and enjoy. Dive into the Twilio SDKs and helper libraries, see our quickstart and API reference docs, read through guides on templates and Twilio phone numbers, and find the sample code you'll need.

Not a developer? See our [WhatsApp product page](#).

Signing Up

To use Twilio's Messaging APIs with WhatsApp, you will need a WhatsApp-enabled phone number, also referred to as a WhatsApp Sender. Check out [Getting Started with WhatsApp](#) to learn how to register your first WhatsApp Sender.

Once you have an approved WhatsApp Sender, continue on below to get started with a WhatsApp Quickstart in the language of your choice!

We suggest starting with the WhatsApp quickstart in your language of choice below to learn how to send and receive WhatsApp messages using the Twilio Programmable Messaging API.

looking for the fastest way to test the ins and outs of working with WhatsApp with Twilio Programmable Messaging, try the quickstart in your language of choice:

- [Python WhatsApp Quickstart](#)
- [C#/.NET WhatsApp Quickstart](#)
- [PHP WhatsApp Quickstart](#)
- [Java WhatsApp Quickstart](#)
- [Node.js WhatsApp Quickstart](#)
- [Ruby WhatsApp Quickstart](#)
- [cURL WhatsApp Quickstart](#)

Can't decide? Head to the [WhatsApp Quickstart overview](#) for your guide to the guides!

Sending one-way messages and notifications with WhatsApp

Check out the Programmable Messaging API Reference

Our [API Reference and overview](#) has setup hints as well as descriptions of features that come with WhatsApp, such as formatting, location messages, and templates.

From there, learn how to send messages with [the Programmable Messaging Message Resource](#). Sending WhatsApp messages is part of Twilio Programmable Messaging, so you'll use the same API calls to send messages.

- [Send and Receive Media Messages with the Twilio API for WhatsApp](#)

Sending One-Time-Passcodes?

WhatsApp is now a more cost effective channel than SMS to send One-Time-Passcodes (OTPs) in many parts of the world. Check out our [Verify WhatsApp API](#) to send OTPs. This purpose-built API intelligently orchestrates OTP delivery between WhatsApp, SMS, RCS and other channels to maximize conversion and reduce cost. In a single phone number verification session, the same OTP code that's generated by Verify is sent across all channels, simplifying code validation.
