

Docs WhatsApp Business Platform

On This Page

We are making changes to the WhatsApp Business Platform pricing model.

Effective July 1, 2025 for all businesses on our platform:

- The conversation-based pricing model will be deprecated
- We will charge [per-message for template messages](#) instead of per-conversation
- Utility templates sent within an open customer service window [will be free](#)

See [Pricing Updates on the WhatsApp Business Platform](#) for additional details.

WhatsApp Business Platform

The WhatsApp Business Platform gives medium to large businesses the ability to connect with customers at scale. You can start WhatsApp conversations with your customers in minutes, send them care notifications or purchase updates, offer personalized services, and provide support in the channel that your customers prefer.

The platform consists of four primary APIs:

- [Cloud API](#), hosted by Meta
- [On-Premises API](#) (which you must host)
- [Business Management API](#)
- [Marketing Messages Lite API](#)

To send and receive messages to and from WhatsApp users, **you must use either Cloud API or the On-Premises API**. The preferred solution is Cloud API, due to its ease of implementation and low maintenance. Regardless of which API you end up using, **you must also use the Business Management API**, which is used to manage WhatsApp Business Account and message templates.

See our [Cloud API vs. On-Premises API](#) document to learn more about the differences between Cloud API and On-Premises API.

Documentation Contents

Overview

Learn about the WhatsApp Business Platform, its components, and how it can benefit your business.

Display Names

Learn about the requirements and options for the name displayed in your messages.

Pricing
